Revision History (A4)

Darren Li, Joseph Haddad

List of Updates:

File	Description of Revision/Addition	Link (if applicable)	Notes (optional)
script.js	Wrote the entire file to read the data from inputs given to the html file and then uses a for loop to write back the data and create the dashboard. Dashboard is created when local storage data is checked to see if data exists to be printed. Added a check to make sure the user is notified before deciding to clear the data.		High level features Based on feedback from A3, we decided to stick to the main feature and add more capabilities to the Todo list. We removed one feature (#3) originally planned in A3. We are going to try to implement feature #2 as an advanced feature.
stylesheet.css	Styled all main UI elements including the dashboard, forms, and title.	<github repo: shared with team OR gdrive folder with raw code files>	
Index.html	Created the layout of the budget tracker including a dashboard, budget form, expense form, and a form to	<github repo: shared with team OR gdrive folder with raw code files>	Revised based on feedback on pseudocode from A3

	change the currency.		

List of Files unchanged:

N/A

<u>Plan:</u>

We plan to completely finish the file by the end of A5 since we are reasonably close to being done.
